AB A kit and method for causing tissue death within a tissue site is disclosed. The kit includes a media with a light activated drug activatable upon exposure to a particular level of ultrasound energy. The kit also includes a catheter with a lumen coupled with a media delivery port through which the light activated drug can be locally delivered to the tissue site. The ultrasound transducer is configured to transmit the level of ultrasound energy which activates the light activated drug with sufficient power that the ultrasound energy can penetrate the tissue site.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Biodegradable polymers are described comprising the recurring monomeric units shown in formula I or II: ##STR1##

wherein X is --O-- or --NR'--, where R' is H or alkyl; L is a branched or straight chain aliphatic group having from 1-20 carbon atoms; M.sub.1 and M.sub.2 are each independently (1) a branched or straight chain aliphatic group having from 1-20 carbon atoms; or (2) a branched or straight chain, oxy-, carboxy- or amino-aliphatic group having from 1-20 carbon atoms; Y is --O--, --S-- or --NR'--, where E' is H or alkyl; R is H, alkyl, alkoxy, aryl, aryloxy, heterocyclic or heterocycloxy; the molar ratio of x:y is about 1; the molar ratio n:(x or y) is between about 200:1 and 1:200; and the molar ratio q:r is between about 1:99 and 99:1; wherein said biodegradable **polymer** is **biocompatible** before and upon biodegradat.

Processes for preparing the polymers, compositions containing the polymers and biologically active substances, articles useful for implantation or injection into the body fabricated from the compositions, and methods for controllably releasing biologically active substances using the polymers, are also described.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Methods of and apparatus for preparing temperature activated gaseous precursor-filled liposomes are described. Gaseous precursor-filled liposomes prepared by these methods are particularly useful, for example, in ultrasonic imaging applications and in therapeutic drug delivery systems.

Gas, gaseous precursors and perfluorocarbons are presented as novel potentiators for ultrasonic hyper-thermia. The gas, gaseous precursors and perfluorocarbons which may be administered into the vasculature, interstitially or into any body cavity are designed to accumulate in **cancerous** and diseased tissues. When therapeutic ultrasonic energy is applied to the diseased region heating is increased because of the greater effectiveness of sound energy absorption caused by these agents.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A radiopaque brachytherapy seed for implantation into a subject includes a **biocompatible** component, a therapeutically active component including a non-radioactive drug, and a radiopaque marker. The **biocompatible** component is (a) physically associated with a therapeutically active component and (b) in contact with the radiopaque marker. The brachytherapy seed has a size and shape suitable for passing through the bore of a needle having an interior diameter of less than about 2.7 millimeters (10 gauge).

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

L3 ANSWER 13 OF 28 USPATFULL

ACCESSION NUMBER: 2002:106455 USPATFULL
TITLE: Compositions and methods for **treating** disease
utilizing a combination of radioactive therapy and
cell-cycle inhibitors

INVENTOR(S): Hunter, William L., Vancouver, CANADA
Gravett, David M., Vancouver, CANADA
Liggins, Richard T., Coquitlam, CANADA
Loss, Troy A.E., North Vancouver, CANADA
Maiti, Arpita, Vancouver, CANADA

EXEMPLARY CLAIM:	1	
NUMBER OF DRAWINGS:	11 Drawing Page(s)	
LINE COUNT:	9469	

AB Disclosed herein are therapeutic devices, compositions and methods for **treating** proliferative diseases. For example, within one aspect of the invention therapeutic devices are provided, comprising a device that locally administers radiation and a cell-cycle inhibitor

L3 ANSWER 14 OF 28 USPATFULL

ACCESSION NUMBER: 2002:88613 USPATFULL
TITLE: Biodegradable polymers chain-extended by phosphates,

biodegradable **polymer** is **biocompatible** before and upon biodegradat.

Processes for preparing the polymers, compositions containing the polymers and biologically active substances, articles useful for implantation or injection into the body fabricated from the compositions, and methods for controllably releasing biologically active substances using the polymers, are also described.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

L3 ANSWER 18 OF 28 USPATFULL

ACCESSION NUMBER: 2000:70426 USPATFULL
TITLE: Targeted gas and gaseous precursor-filled liposomes
INVENTOR(S): Unger, Evan C., Tucson, AZ, United States
Fritz, Thomas A., Tucson, AZ, United States
Matsunaga, Terry, Tucson, AZ, United States
Ramaswami, VaradaRajan, Tucson, AZ, United States

AB A kit and method for causing tissue death within a tissue site is disclosed. The kit includes a media with a light activated drug activatable upon exposure to a particular level of ultrasound energy. The kit also includes a catheter with a lumen coupled with a media delivery port through which the light activated drug can be locally delivered to the tissue site. The ultrasound transducer is configured to transmit the level of ultrasound energy which activates the light activated drug with sufficient power that the ultrasound energy can penetrate the tissue site.

AB The title compns. comprise: (A) a P-contg. and DL-lactide-based polymer, and (B) .gtoreq.5% one or more radiosensitizer(s), wherein a single dose of the compns. provides extended release of B over .gtoreq.1 day and the compns. are effective to inhibit the growth of neoplasm upon: (1) contacting (or at least partial contact) with the neoplasm or tissue surrounding the neoplasm and (2) subsequent treatment with electromagnetic radiation. Thus, melt-polymg. 28.5 g D,L-lactide and 1.5 g 1,2-propanediol at 135.degree. for 16 h gave a polyester prepolymer, which was added with 2.5 mL dichlorophosphate in 25 mL chloroform in the presence of 6.9 mL triethylamine and 1.21 g DMAP dropwise at 4.degree. for 40 min and further reacted for a h then under reflux for 38 h to give an A after the workup, 5.0 g of which was prepd. to give a 15% soln. of CH₂Cl₂ and mixed homogeneously with 5.0 g IUdR with necessary tech. to give a title compn. showing claimed properties.

AB The present invention features methods of administering a therapeutic agent to a patient's lymph nodes by instillation of microparticles or nanoparticles comprising a biocompatible polymer and the therapeutic agent into the patient's bladder. The invention also features methods of modulating a patient's immune response and methods of systemic delivery of a therapeutic agent systematically using the administration methods of the invention. Microspheres of biocompatible poly(D,L-lactide-co-Et phosphate) contg. LacZ DNA were prepd. with encapsulation efficiency of 96% and loading level of 2.0%. Delivery of the microspheres to mice bladder was studied.

AB The title polymers are prepd. for use as drug delivery devices and implants. Thus, 5-fluorouracil (I), 1,1,1,3,3,3,-hexamethyldisilazane was refluxed in the presence of ammonium sulfate to obtain 2,4-bis-o-trimethylsilyl-5-fluorouracil, which was conjugated to MDI-bis(2-hydroxyethyl)phosphite-PEG copolymer. The sustained-release of I from the polymer was obsd. for 30 days.

IT **147737-96-ODP**, conjugates with (trimethylsilyl)fluorouracil

AB The title comps. comprise: (A) a P-contg. and DL-lactide-based polymer, and (B) .gtoreq.5% one or more **radiosensitizer(s)**, wherein a single dose of the comps. provides extended release of B over .gtoreq.1 day and the comps. are effective to inhibit the growth of neoplasm upon: (1) contacting (or at least partial contact) with the neoplasm or tissue surrounding the neoplasm and (2) subsequent treatment with electromagnetic radiation. Thus, melt-polymg. 28.5 g D,L-lactide and 1.5 g 1,2-propanediol at 135.degree. for 16 h gave a polyester prepolymer, which was added with 2.5 mL dichlorophosphate in 25 mL chloroform in the presence of 6.9 mL triethylamine and 1.21 g DMAP dropwise at 4.degree. for 40 min and further reacted for a h then under reflux for 38 h to give an A after the workup, 5.0 g of which was prepd. to give a 15% soln. of CH₂Cl₂ and mixed homogeneously with 5.0 g IUdR with necessary tech. to give a title compn. showing claimed properties.
